

## PROCESS CONTROL UNITS ESM-XX50

### ESM-4450, ESM-7750, ESM-9950, ESM-4950, ESM-9450

Universal Input PID Process Controller with

Smart I/O Module System

- 4 digits process (PV) ve 4 digits process set (SV) display
- Universal process input(TC, RTD, mV ---, V ---, mA ---)
- Optional secondary sensor input
- Dual or multi point calibration for ---voltage & ---Current input
- Configurable ON/OFF, P, PI, PD and PID control forms
- Auto-tune and Self-tune PID
- Manual/Automatic mode selection for control outputs
- Bumpless transfer
- Motorized valve control function
- Programmable heating, cooling and alarm functions for control outputs
- 8 steps profile control ( Ramp & Soak ) function and start-holdstop by using logic input module
- Remote set point function by using analogue input modules
- Re-Transmission
- Detection of heater failure by using 0...5 A~CT input module
- Smart I/O module system
- RS-232 (standard) or RS-485 (optional) serial communication with Modbus RTU protocol

### SPECIFICATIONS:

#### Process Inputs

**Universal Input:** Universal input, TC, RTD, ---Voltage/Current Thermocouple (TC) : L,(DIN 43710), J, K, R, S, T, B, E ve N (IEC584.1)(ITS90), C (ITS90)

Thermoresistance (RTD): PT-100 (IEC751)(ITS90)

--- Input : mV, V, mA

**Measurement Range:** Please refer to Table-1 for selection of input type and scale.

**Accuracy:**  $\pm 0.25\%$  of full scale for thermocouple, thermoresistance and voltage

**Cold Junction Compensation:** Automatically  $\pm 0.1^{\circ}\text{C}/1^{\circ}\text{C}$ .

**Line Compensation:** Maximum 10 Ohm

**Sensor Break Protection:** Upscale

**Sampling Cycle:** 3 samples per second

**Input Filter :** 0.0 ile 900.0 seconds

#### CONTROL

**Control Forms:** Programmable ON / OFF, P, PI, PD or PID.

#### OUTPUT

**Standard Relay Output :** 5A@250V $\sim$  (Programmable control or alarm output) (Electrical Life : 100.000 Operation (Full Load))

#### Output Modules

-Relay Output Module

-SSR Driver Output Module (Max.26mA, 22V ---)

-Digital (Transistor) Output Module (Maks.40 mA@18V ---)

-0/4...20 mA--- Current Output Module

#### Input Modules

-Digital Input Module

-0/4...20 mA--- Current Input Module

-0...5A~ CT Input Module

-TC or 0...50mV --- Input Module

-PT-100 Input Module

-0...10V --- Input Module

#### Supply Voltage

100-240V  $\sim$  50/60 Hz (-%15;+%10) -6VA

24V  $\sim$  50/60 Hz(-%15 ; +;%10)-6VA or 24V --- (-%15 ; +;%10)-6W  
(Supply Voltage must be determined in order.)

#### INDICATORS

##### Process Indicators :

ESM-4450 and ESM-9450 : 10.1 mm Red 4 digit LED Display

ESM-4950 and ESM-7750 : 13.2 mm Red 4 digit LED Display

ESM-9950 : 19 mm Red 4 digit LED Display

##### Setpoint Indicators :

ESM-4450, ESM-4950 and ESM-9450 : 8 mm Green 4 digit LED Display

ESM-7750 : 9.1 mm Green 4 digit LED Display

ESM-9950 : 10.8 mm Green 4 digit LED Display

**LED Indicators :** AT(Auto Tuning), SV(Set Value), Man(Manuel Operation),Auto(Auto Operation), O1/2/3 (Output status Leds), °C, °F, V, Ramp and Remote LEDs

#### Environmental Ratings and Physical Specifications

**Operating Temperature:** 0...50°C

**Max. Operating Humidity:** 0-90%RH (non-condensing)

**Protection Class:** NEMA 4X (IP65 at front, IP20 at rear).

**Mounting:** Type-1 Enclosure Mounting

**Installation:** Fixed installation Category II

**Over Voltage Category:** II

**Pollution Degree:** II, office or workplace, none conductive pollution

#### Weight:

ESM-4450 : 210 gr. ; ESM-4950 : 260 gr.

ESM-7750 : 270 gr. ; ESM-9950 : 370 gr. ; ESM-9450 : 260 gr.

#### Dimensions / Panel Cut-Out:

ESM-4450 : (48 x 48mm, Derinlik:116 mm) / (46 x 46mm)

ESM-4950 : (96 x 48mm, Derinlik:86.5 mm) / (92 x 46mm)

ESM-7750 : (72 x 72mm, Derinlik:87.5 mm) / (69 x 69mm)

ESM-9950 : (96 x 96mm, Derinlik:87.5 mm) / (92 x 92mm)

ESM-9450 : (48 x 96mm, Derinlik:86.5 mm) / (46 x 92mm)

#### Minimum Distance Between Panel Cut-Out Centers:

ESM-4450 : X=65mm, Y=65mm

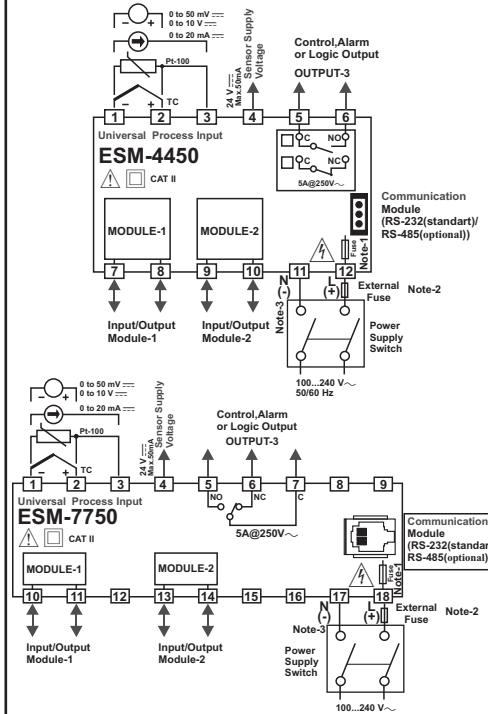

ESM-4950 : X=129mm, Y=65mm

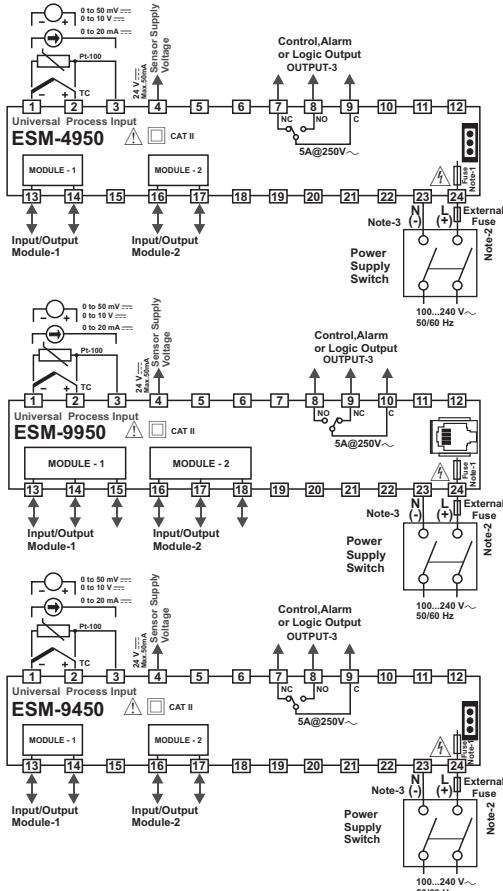

ESM-7750 : X=97mm, Y=97mm

ESM-9950 : X=129mm, Y=129mm

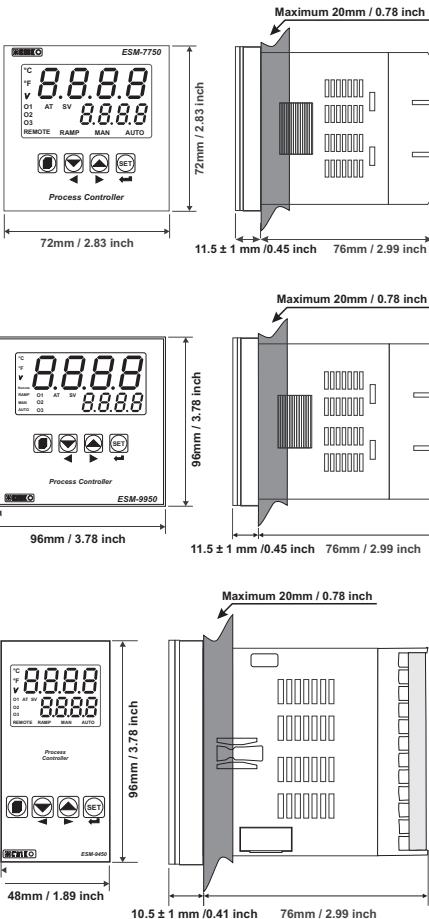

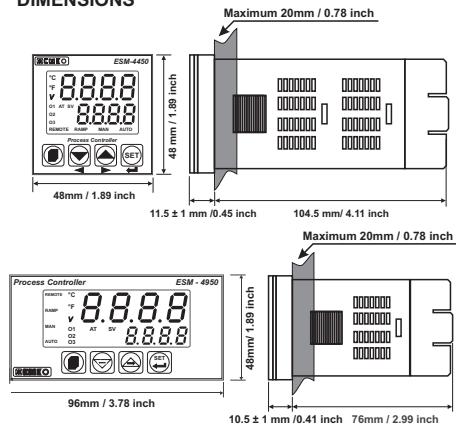

ESM-9450 : X=65mm, Y=129mm

#### Electrical Connections

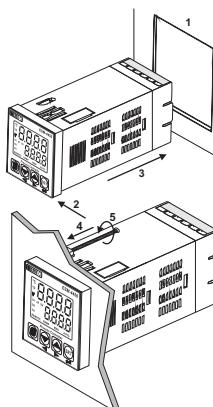

## DIMENSIONS

## PANEL MOUNTING

1-Before mounting the device in your panel, make sure that the cut-out is of the right size.

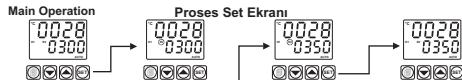

2-Check front panel gasket position

3-Insert the device through the cutout. If the mounting clamps are on the unit, put out them before inserting the unit to the panel.

4-Insert the unit in the panel cut-out from the front side.

5-Insert the mounting clamps to the holes that located top and bottom sides of device and screw up the fixing screws until the unit completely immobile within the Panel

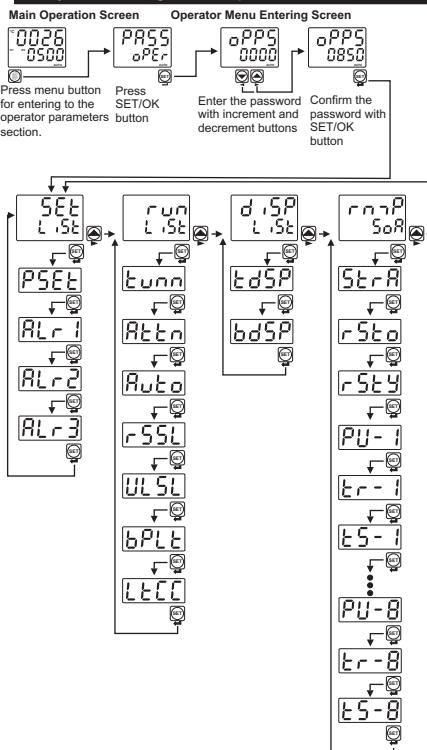

## Adjustment of Process Set Value

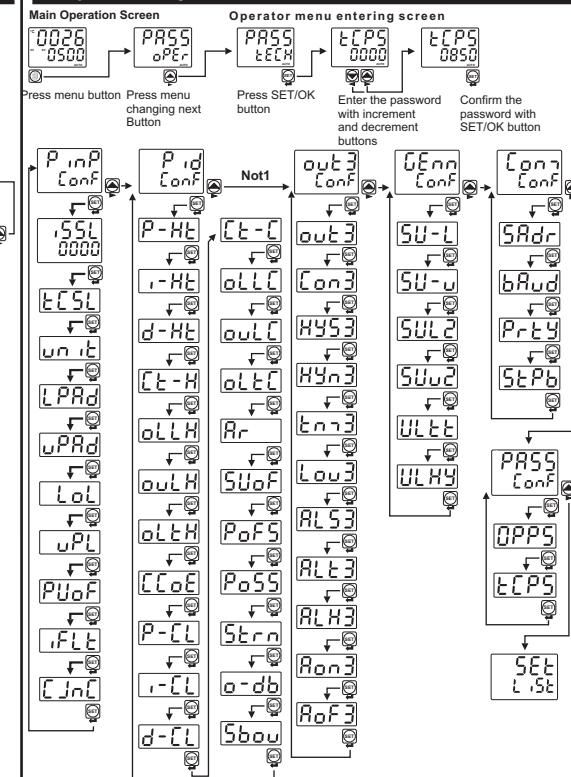

Press menu button to change set value with increment and decrement buttons.

Press menu button to exit without saving Set value.

## Easy Access Diagram for Operator Parameters

## Easy Access Diagram for Technician Parameters

## Set LiSt: Set values

**PSET** Proses Set (-1999,9999)Unit

**ALr1** Alarm-1 Set (-1999,9999)Unit

**ALr2** Alarm-2 Set (-1999,9999)Unit

**ALr3** Alarm-3 Set (-1999,9999)Unit

## Run LiSt: Selection of PID Tune and Operation Form

**Tunn** TUNE SELECTION By selecting one of the methods below, device can determine the PID parameters.

Device operates according to the defined PID

Auto tune (Limit Cycle Tuning) operation

Self tune (Step Response Tuning) operation

Auto-Self Tune Self Tune operation is performed, if the conditions are realized when power on firstly. In normal operation, it controls the tune conditions in Auto Tune selection which explained below. If any of the conditions is realized, it performs the Auto Tune operation

## REnn AUTOMATIC TUNE SELECTION

Device does not do (Limit Cycle Tuning) operation

Device does (Limit Cycle Tuning) operation

## Auto OPERATION FORM SELECTION

Automatic: The device automatically calculates the %output

Manual: %output rate can be controlled manually by using direction buttons.

## rSSL Ramp/Soak Control

Ramp/Soak function is deactivated

Ramp/Soak function is active

Ramp/Soak function is holding. Real time is stopped

## ULSL MOTORIZED VALVE CONTROL

Motorized valve control is deactive

Motorized valve runs with heating PID function.

Motorized valve runs with cooling PID function.

## BPLT BUMBLESS TRANSFER

Process output value in manual control is not taken into consideration while passing from manual control to automatic control. New control output that is measured in automatic control is applied to process output. Last %output value is taken output value of manual control and manual control continues while passing from automatic control to manual control

**YES** While passing from manual control to automatic control, last process output value in manual control is accepted as first process output value in automatic control and automatic control continues to run. Last % process output value in automatic control is accepted as process output value of manual control and manual control continues to run.

#### LCC ALARM LATCH CANCELING

**no** Alarm latch canceling is not performed.

**YES** If there is an alarm output with latching and there is no alarm status, latching operation will be finished by the device. When it is finished, this parameter becomes **no**. Automatically

#### diSP LiSt: Function Selection for Top and Bottom Display

##### EdSP It defines the function of the top display.

This parameter determines which value is shown in top display.

**0000** Process value (PV) is shown in top display

**0001** Result of subtraction of process set value from process value (SV-PV) is shown in top display

**0002** If one of the analogue input modules is plugged in Module-1 or Module-2 socket, measured value from this module input is shown in top display.

##### bdSP It defines the function of the bottom display

This parameter determines which value is shown in bottom display.

**0000** Process set value (SV) is shown in bottom display.

**0001** %Output value that is applied to process control output is shown in bottom display.

**0002** Status of the Ramp/Soak function is shown in bottom Display.

**0003** If one of the analogue input modules is plugged in Module-1 or Module-2 socket, measured value from this module input is shown in top display.

**0004** If CT~ input module (EMI-420) is plugged in Module-1 or Module-2 socket, measured value from this module input is shown in bottom display.

#### rmP SoA: Configuration of RAMP/SOAK Function and Step SET Values

##### StR Soft-Start parameter.

When the power is applied to the device, process value reaches to the set value at the end of this time.

##### rSto Ramp Soak Tolerance Parameter (%0;%50 Scale)

In Ramp/Soak operation, if process value is out of the tolerance that is defined with this parameter, then time is stopped.

##### rSty Ramp/Soak program step selection parameter.

**0000** 1.program 1-4 steps

**0001** 2.program 5-8 steps

**0002** Steps between 1-8 is used as one program.

##### Pu - I Ramp/Soak step set value.

For ramp operation ; process value reaches to step set values that are defined with these parameters at the end of the time that are defined in ramp time parameters. For soak operation ; process value is constant step set value that are defined in these parameters for time that are defined in soak time parameters. Ramp/Soak step set values can be adjusted from minimum value of set scale to maximum value of set scale.

##### Er - I Ramp time for Ramp/Soak

Process value reaches to step set values at the end of the time that are defined in these parameters.

##### Er - B Soak time for Ramp/Soak

Process value is constant in step set value for time that are defined in these parameters.

#### PinP ConF: Process Input Type and Relevant Parameters with Process Input

##### SS1 Defines the process input

**0000** TC input type selection

**0001** RTDinput type selection

**0002** ---Voltage/Current input type selection.

**ECSL** Defines type and scale of the thermocouple for TC input. It is active if TC input type is selected

**0000** L (-100°C;850°C) or (-148°F;1562°F)

**0001** L (-100.0°C;850.0°C) or (-148.0°F;999.9°F)

**0002** J (-200°C;900°C) or (-328°F;1652°F)

**0003** J (-199.9°C;900.0°C) or (-199.9°F;999.9°F)

**0004** K (-200°C;1300°C) or (-328°F;2372°F)

**0005** K (-199.9°C;999.9°C) or (-199.9°F;999.9°F)

**0006** R (0°C;1700°C) or (32°F;3092°F)

**0007** R (0.0°C;999.9°C) or (32.0°F;999.9°F)

**0008** S (0°C;1700°C) or (32°F;3092°F)

**0009** S (0.0°C;999.9°C) or (32.0°F;999.9°F)

**0010** T (-200°C;400°C) or (-328°F;752°F)

**0011** T (-199.9°C;400.0°C) or (-199.9°F;752.0°F)

**0012** B (44°C;1800°C) or (111°F;3272°F)

**0013** B (44.0°C;999.9°C) or (111.0°F ; 999.9°F)

**0014** E (-150°C;700°C) or (-238°F;1292°F)

**0015** E (-150.0°C;700.0°C) or (-199.9°F;999.9°F)

**0016** N (-200°C;1300°C) or (-328°F;2372°F)

**0017** N (-199.9°C;999.9°C) or (-199.9°F;999.9°F)

**0018** C (0°C;2300°C) or (32°F;3261°F)

**0019** C (0.0°C;999.9°C) or (32.0°F;999.9°F)

**rcdS** Defines type and scale of sensor for RTD input. It is active if RTD input

**0000** PT-100 (-200°C ; 650°C ) or (-328°F ; 1202°F)

**0001** PT-100 (-199.9°C ; 650.0°C ) or (-199.9°F;999.9°F)

##### uRSL --- Voltage / Current Input Selection

This parameter is active if ---Voltage / Current is selected.

**0000** 0...50mV --- (-1999 ; 9999)

**0001** 0...5V --- (-1999 ; 9999)

**0002** 0...10V --- (-1999 ; 9999)

**0003** 0...20mA --- (-1999 ; 9999)

**0004** 4...20mA --- (-1999 ; 9999)

##### dPnT Display Point Position

This parameter is active if ---Voltage / Current is selected.

**0000** No point

**0001** Between first and second digits "0.0"

**0002** Between second and third digits "0.0"

**0003** Between third and fourth digits "0.000"

##### uCRl Display Value Adjustment Type

**0000** Fixed dual point display adjustment. Display adjustment low point value is fixed to -1999, display adjustment high point value is fixed to 9999.

**0001** User can do dual point display adjustment with tPoL and tPoH.

**0002** User can do defined 16 display adjustment points.

##### tPoL Low Point Display adjustment (-1999, 9999)Unit

Active if ---Voltage / Current input is selected.

##### tPoH High Point Display adjustment (-1999, 9999)Unit

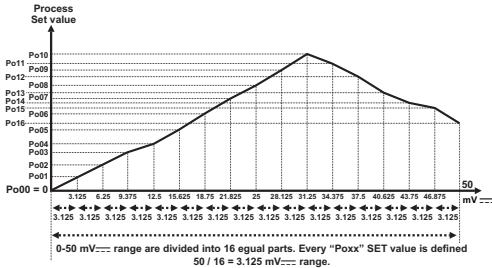

Active if ---Voltage / Current input is selected.

##### Po00 Display adjustment points (-1999, 9999)Unit

This parameter is active if ---Voltage / Current is selected.

**0000** In multi point display adjustment operation, defined scale is divided into 16 adjustment points.

For example : **uRSL** is **0** (0-50 mV---).

#### Coefficient value (1.000, 9.999)

Process value is multiplied with this value.

Active if  Voltage / Current input is selected.

#### Unit selection

- Unit °C
- Unit °F

Unit is Voltage. Active if  Voltage / Current input is selected

No unit. Active if  Voltage / current input is selected

#### Process Value Low Point Adjustment Parameter (For TC and RTD input scales)

It can be adjusted -50% to 50% of scale.

#### Process Value Up Point Adjustment Parameter (For TC and RTD input scales)

It can be adjusted -50% to 50% of scale.

#### Operating Scale Minimum Value

(Scale Low Point, Scale High Point)Unit

Used for Proportional band calculation and display blink.

#### Operating Scale Maximum Value

(Scale Low Point, Scale High Point)Unit

Used for Proportional band calculation and display blink.

#### Display offset for process value (Scale -10%, Scale +10%)Unit

This parameter value is added to the process value.

#### Filter Time (0.0, 900.0)Second

Defines filter time for display value.

#### Cold Junction Compensation

This parameter is active if process input is selected TC input.

- Yes Cold junction compensation is active.
- no Cold junction compensation is not active.

**Scale:** The difference between high point and low point of the process input type. Example: If ICSL = 2 (low point is -200, high point is 900), then scale is 1100. If input type is Voltage/Current, then the scale is difference between tPoH and tPoL parameters.

#### **Pid Conf: PID Configuration Parameters**

##### PROPORTIONAL BAND (0.0, 999.9)%

If   $P_{-HC} = 1000^{\circ}\text{C}$ ,   $L_{-CL} = 0^{\circ}\text{C}$  and   $P_{-DC} = 50.0$   
 then Proportional Band =  $(\frac{P_{-HC}}{L_{-CL}} - \frac{L_{-CL}}{P_{-DC}}) * \frac{P_{-DC}}{100.0}$   
 Proportional Band =  $(1000-0)*50.0/100.0 = 500^{\circ}\text{C}$

##### INTEGRAL TIME (0.0, 3600)Second

Can be changed by the user. After completed the tuning correctly, integral time value changes automatically. If it is 0, integral control is deactivated.

##### DERIVATIVE TIME (0.0, 999.9)Second

Can be changed by the user. After completed the tuning correctly, integral time value changes automatically. If it is 0, derivative control is deactivated.

##### CONTROL PERIOD TIME (1, 150)Second

Process output period time

##### MINIMUM CONTROL OUTPUT (0.0, $ouLH$ )%

Even as a result of the PID calculation device calculates the %output value less than this parameter, heating or cooling output is active minimum for OLL parameter.

#### MAXIMUM CONTROL OUTPUT ( $ouLH$ , 100.0)%

Even as a result of the PID calculation device calculates the %output value greater than this parameter, heating or cooling output is active maximum for OUL parameter.

#### HEATING MINIMUM CONTROL OUTPUT TIME(0.0 $L_{-H}$ )sec

Heating output can not be active less than this parameter. Even if this parameter is 0, this parameter is accepted 50 msec for security.

#### COOLING PROPORTIONAL BAND COEFFICIENT (0.0, 100.0)

If heating and cooling PID is used in a system, tune operation is performed by heating output. Cooling proportional parameter is calculated with heating proportional band value and coefficient( $P_{-CL} = P_{-Ht} * CCoE / 100.0$ )

#### COOLING PROPORTIONAL BAND (000.0, 999.9)%

If   $uPL = 1000^{\circ}\text{C}$ ,   $L_{-CL} = 0^{\circ}\text{C}$  and   $P_{-DC} = 50.0$  ise  
 Proportional Band =  $(\frac{uPL}{L_{-CL}} - \frac{L_{-CL}}{P_{-DC}}) * \frac{P_{-DC}}{100.0}$   
 Proportional Band =  $(1000-0)*50.0/100.0 = 500^{\circ}\text{C}$

#### COOLINGINTEGRALTIME (0000 sec, 3600 secs)

It can be changed by the user. When tune operation finishes, it can be changed by the device. If it is 0, integral control part does not perform.

#### COOLINGDERIVATIVE TIME (000.0 sec, 999.9 secs)

It can be changed by the device. When tune operation finishes, it can be changed because derivative control part does not perform.

#### COOLING OUTPUT PERIOD TIME (1 sec, 150 secs)

It is control period of cooling output.

#### COOLING MINIMUM CONTROL OUTPUT (0.0 $ouLL$ )%

It is % of cooling minimum output. If heating and cooling PID control functions operate together, this parameter is not considered. Even as a result of the cooling PID calculation device calculates the output value less than this parameter, cooling output is active minimum for OLLC parameter.

#### COOLING MAXIMUM CONTROL OUTPUT ( $ouLL$ ,100.0)%

It is % of cooling maximum output.

Even as a result of the cooling PID calculation device calculates the output value greater than this parameter, cooling output is active maximum for OULLC parameter.

#### COOLING MINIMUM CONTROL OUTPUT ( 0.0 $L_{-C}$ )

Cooling output can not be active less than this parameter. Even if this parameter is 0, this parameter is accepted 50 msec for security.

#### ANTI-RESET WINDUP ( $ouR$ ,0-SCALE HIGH POINT)UNIT

While PID operation is running if  $PSET - Rr <= \text{process value} <= PSET + Rr$  condition is true, integral value is calculated. If the condition is not true, integral value is not calculated and last calculated integral value is used. If Ar Parameter is selected   $ouR$ , heating proportional band is used for heating PID process instead of Ar Parameter and cooling proportional band is used for cooling PID process instead of Ar Parameter.

#### SETVALUEOFFSET

(-SCALE HIGH POINT / 2) , (SCALE HIGH POINT / 2)Unit  $PSET + SuOf$  is used as set value in PID calculations. This parameter is used for shifting the proportional band.

#### PID OUTPUT OFFSET

(FOR HEATING PID 0.0, 100.0)%  
 (FOR COOLING PID-100.0, 0.0)%

(FOR HEATING&COOLIND PID : -100.0, 100.0)%

This parameter is added to "Output %" which is calculated at the end of the PID.

#### OUTPUT OFFSET RELATED TO PID SET

(FOR HEATING PID 0.0, 100.0)%

(FOR COOLING PID-100.0, 0.0)%

(FOR HEATING&COOLIND PID : -100.0, 100.0)%

This parameter is added to the %process output that is calculated at the end of the PID according to process set value

$$P_{osS} * PSET / (uPL - L_{-CL})$$

## **[Strn] PROCESS VALUE STABILIZATION (1, SCALE HIGH POINT)Unit**

It is used for controlling if process value oscillates or not when **Errn1** Parameter is **R\_Evn1** or **R\_Est1**. If, **PSET - Strn1 <= Process Value <= PSEE + Strn1** condition is not true, then device start tuning operation

**SCALE LOW POINT :** Minimum process input value in Pt-100 and Tc inputs. -1999 for fixed dual point display adjustment used inputs. Scale low point is the lowest one from **[EPoL]** or **[EPoH]** for selectable dual point display adjustment used inputs. Scale low point is the lowest one from **[Po00]** or **Po16** for multi point display adjustment used inputs

**SCALE HIGH POINT :** Maximum process input value in Pt-100 and Tc inputs. 9999 for fixed dual point display adjustment used inputs. Scale high point is the biggest one from **[EPoL]** or **[EPoH]** for selectable dual point display adjustment used inputs. Scale high point is the biggest one from **[Po00]** or **Po16** for multi point display adjustment used inputs

## **[o-db] PROPORTIONAL BAND SHIFTING**

**((-SCALE HIGH POINT / 2), (SCALE HIGH POINT / 2))Unit**

If cooling function is performed ;

Cooling process set value is calculated by adding set value

**[PSET]** With parameter **[o-db]**

Control form can be ON/OFF or PID.

If set value for heating =**PSET** + **Su00F** ;  
Then set value for cooling =**PSET** + **Su00F** + **[o-db]**

## **[Sbou] SENSOR BREAK OUTPUT VALUE**

**(FOR HEATING PID 0,0, 100,0%)**

**(FOR COOLING PID -100,0, 0,0%)**

When sensor breaks, controlling of the process can continue by entering %output value to **[Sbou]** parameter.

If this parameter 0,0, process control output does not perform an output when sensor breaks.

## **ioP1 ConF: MODULE-1 Configuration Parameters**

These parameters are active if EMO-400 (Relay Output), EMO-410 (SSR Driver) or EMO-420 (Digital Output) module is plugged in Module-1 socket.

### **[out1] Defines output function for Module-1**

**[HERE]** Heating

**[Cool]** Cooling

**[Lout]** Logic output

**[Con]** It is active if output function of Module-1 is heating or cooling.

**[ONOFF]** ON/OFF

**[PID]** PID

**[HYS1]** Hysteresis value for OUT-1. It can be adjusted from 0% to 50% of defined scale. ( It is active if ON/OFF control is selected. )

**[HYn1]** It determines operation form of hysteresis. ( ON/OFF )

**[0000]** SV + HYS/2 and SV - HYS/2

**[0001]** SV and SV+HYS or SV and SV-HYS

**[tov1]** In ON/OFF operation, this time must be passed for the output to be

**[Lout]** logic output function of output module in Module-1

It is active if output function of Module-1 is Lout (Logic Output)

**[0000]** Alarm output

**[0001]** Manual /Automatic data output

**[0002]** Sensor break alarm output

**[0003]** Output is active when the process value is out of the band which is defined with minimum value of operating scale **[Lol]** And maximum value of operating scale **[Lhi]**

**[0004]** Output indicates that Ramp/Soak function has finished

**[0005]** Sensor break alarm output for analogue input module in Module-2 socket. ( It is visible if one of analogue input modules is plugged in Module-2 socket )

**[0006]** If process value is less than minimum value of operating scale for analogue input module in Module-2 socket or greater than maximum value of operating scale for analogue input module in Module-2 socket, process output becomes active.(This parameter is visible if one of the analogue input modules is plugged in Module-2 socket)

**[RL5\_1] Measurement input selection for Module-1 alarm output.**  
This parameter is visible if Logic output function of Module-1 is Alarm output and one of the analogue input modules is plugged in Module-2 socket

**[0000]** Alarm output runs according to the process input.

**[0001]** Alarm output runs according to the analogue input module (2nd sensor input) in Module-2 socket

### **[RL6\_1] MODULE-1 alarm**

It determines alarm type. It is active if logic output function of Module-1 is an alarm output.

**[0000]** Process high alarm

**[0001]** Process low alarm

**[0002]** Deviation high alarm

**[0003]** Deviation low alarm

**[0004]** Deviation band alarm.

**[0005]** Deviation range alarm

**[0006]** Heater failure alarm. It is active if ~ CT input module is plugged in Module-2 socket.

### **[RLH\_1] MODULE-1 Alarm-1 hysteresis value.**

It is active if logic output function of Module-1 is an alarm output.

### **[Ron\_1] Alarm on delay time (0, 9999)Seconds**

It is active if logic output function of Module-1 is an alarm output

### **[RoF\_1] Alarm off delay time (0, 9998)Seconds**

Alarm off delay time. It can be adjusted from 0000 to 9998 seconds. When the value is greater than 9998 **[LECH]**, is seen on the display. It means alarm latching output is selected.

## **ioP1 ConF: MODULE-1 Configuration Parameters**

**[i]** These parameters are active if EMO-x30 (0/4...20 mA --- Akım Çıkış) mmodule is plugged in Module-1 socket.

### **[oRt\_1] Configuration of analogue output module in odule-1**

**[0000]** 0...20mA--- output is selected

**[0001]** 4...20mA--- output is selected

### **[oRa\_1] Function selection of analogue output module in Module-1 socket.**

**[HERE]** Heating

**[Cool]** Cooling.

**[RETr]** Re-transmission

### **[REt\_1] MODÜL-1 re-transmission function**

(It is active if "re-transmission" function is selected for analogue output module in Module-1 socket

**[REPr]** It retransmits Process value to analogue output.

**[REPr]** difference of the process value and the set value

**[REPU]** It retransmits Set value to analogue output.

## **ioP1 ConF: MODULE-1 Configuration Parameters**

**[i]** These parameters are active if EMI-400 (Digital Input) plugged in Module-1 socket.

### **[Lin\_1] Configuration of digital input in Module-1 socket.**

**[0000]** Manual /Automatic selection input

**[0001]** Auto Tune ( Limit Cycle Tuning ) Start/Stop input.

**[0002]** Ramp&Soak Start/Stop input.

**[0003]** Ramp&Soak Start/Hold input.

**[0004]** Alarm Latch Canceling.

**[0005]** Output Control Enable/Disable Selection.

**[i]** If Digital Input plugged in Module-1 and Module-2 socket, do not select same function for two modules.

### ioP1 ConF: MODULE-1 Configuration Parameters

These parameters are active if EMI-410 (0/4...20mA)

**i** **---current Input**, EMI-430 (TC or 0...50mV--- Input), EMI-X40 (PT-100 Input) or EMI-450 (0...10V--- Input) module is plugged in Module-1

**SL** Configuration of analogue input module in Module-1 socket.

**0000** TC input type selection. This must be selected if analogue input module in Module-1 socket is EMI-430.

**0001** PT-100 input type selection. This must be selected, if analogue input module in Module-1 socket is EMI-440.

**0002** --- Voltage / Current input type selection. This must be selected if analogue input module in Module-1 socket is EMI-410 , EMI-430 or EMI - 450.

**ECSL** **MODULE-1TC** input module in Module-1 sensor type selection. It is active if input type of Module-1 is selected TC.

**0000** L (-100°C;850°C) or (-148°F;1562°F)

**0001** L (-100.0°C;850.0°C) or (-148.0°F;999.9°F)

**0002** J (-200°C;900°C) or (-328°F;1652°F)

**0003** J (-199.9°C;900.0°C) or (-199.9°F;999.9°F)

**0004** K (-200°C;1300°C) or (-328°F;2372°F)

**0005** K (-199.9°C;999.9°C) or (-199.9°F;999.9°F)

**0006** R (0°C;1700°C) or (32°F;3092°F)

**0007** R (0.0°C;999.9°C) or (32.0°F;999.9°F)

**0008** S (0°C;1700°C) or (32°F;3092°F)

**0009** S (0.0°C;999.9°C) or (32.0°F;999.9°F)

**0010** T (-200°C;400°C) or (-328°F;752°F)

**0011** T (-199.9°C;400.0°C) or (-199.9°F;752.0°F)

**0012** B (44°C;1800°C) or (111°F;3272°F)

**0013** B (44.0°C;999.9°C) or (111.0°F ; 999.9°F)

**0014** E (-150°C;700°C) or (-238°F;1292°F)

**0015** E (-150.0°C;700.0°C) or (-199.9°F;999.9°F)

**0016** N (-200°C;1300°C) or (-328°F;2372°F)

**0017** N (-199.9°C;999.9°C) or (-199.9°F;999.9°F)

**0018** C (0°C;2300°C) or (32°F;3261°F)

**0019** C (0.0°C;999.9°C) or (32.0°F;999.9°F)

**RES1** **MODULE-1 PT-100** input module in Module-1 sensor type selection. It is active if input type of Module-1 is selected PT-100

**0000** PT-100 (-200°C ; 650°C) or (-328°F ; 1202°F)

**0001** PT-100 (-199.9°C ; 650.0°C) or (-199.9°F ; 999.9°F)

**URS1** **MODÜL-1 ---Voltage/Current Input Module Selection**

It is active if input type of Module-1 is selected ---Voltage/Current

**0000** 0...50mV --- (-1999 ; 9999 )

**0001** 0...5V --- (-1999 ; 9999 )

**0002** 0...10V --- (-1999 ; 9999 )

**0003** 0...20mA --- (-1999 ; 9999 )

**0004** 4...20mA --- (-1999 ; 9999 )

**dPn** **point position for display**

.It is active if input type of Module-1 is selected ---Voltage /Current.

**0000** No point

**0001** 000.0

**0002** 00.00

**0003** 0.00

**ICR** **Calibration type**

.It is active if input type of Module-1 is selected ---Voltage /Current.

**0000** Fixed dual point calibration is performed. Minimum value of calibration is -1999 and maximum value of calibration is 9999.

**0001** Selectable dual point calibration is performed.

**LL** Defines minimum value for selectable dual point calibration.

.It is active if input type of Module-1 is selected ---Voltage /Current.

**HL** Defines maximum value for selectable dual point calibration.

.It is active if input type of Module-1 is selected ---Voltage /Current.

**unt** Unit selection

Unit is °C

Unit is °F

Unit is U.

- No unit.

**LoL** Minimum value of operating scale (Low Limit). It can be changed according to analogue input type and scale.

**uPL** Maximum value of operating scale (High Limit). It can be changed according to analogue input type and scale

**IPu** Display offset for value in analogue input module. It can be adjusted from -10% to +10% of scale. This value is added to the process value.

**FL** It is filter time for input signal. It can be adjusted from 0.0 to 900.0

**CJn** It decides if cold junction compensation is active or not for TC input module in Module-1 socket. It is active if process input of Module-1 is TC input.

Cold junction compensation is active

Cold junction compensation is not active

**rES1** It determines if the measured value from analogue input module in Module-1 socket is used as Remote Set or not. This parameter is visible if point position and unit parameters are same for process input and analogue input module.

Measured value from analogue input module in Module-1 socket is used as process set value. User defined process set value is not considered

Measured value from analogue input module in Module-1 socket is not used as process set value. User defined process set value is considered

### ioP1 ConF: MODULE-1 Configuration Parameters

**i** These parameters are active if EMI-420(~ CT) Input Module is plugged in Module-1 socket.

**Ctr1** Current transfer ratio for Module-1. It can be adjusted from 0 to 100.

Example : For 100:5A type current transformer  
;This parameter must be Ctr1= 100/5 = 20

### ioP2 ConF: MODULE-2 Configuration Parameters

**i** All the functions that apply for module-1, module-2 applies to.

### out3 ConF: Output-3 Configuration Parameters

**out3** Defines output function for Output-3

Heating

Cooling

Logic output

**On3** Defines control algorithm of Output-3.

It is active if output function of Output-3 is heating or cooling

ON/OFF control algorithm

PID control algorithm

**HYS3** Hysteresis value for OUT-3. It can be adjusted from 0% to 50% of defined scale. ( It is active if ON/OFF control is selected)

It determines operation form of hysteresis. ( It is active if ON/OFF control is selected)

**HyN3** 0000 SV+ HYS/2 and SV- HYS/2

**0001** SV and SV+HYS or SV and SV-HYS

**En3** In ON/OFF operation, this time must be passed for the output to be energised again. ( It is active if ON/OFF control is selected)

**Lou3** It determines logic output function of Output-3.  
It is active if output function of Output-3 is Lou(Logicoutput)

**0000** Alarm output

**0001** Manual /Automatic data output

**0002** Sensor break alarm output

**0003** POutput is active when the process value is out of the band which is defined with minimum value of operating scale  $L_{OL}$  And maximum value of operating scale  $U_{PL}$

**0004** Output indicates that Ramp/Soak function has finished

**0005** Sensor break alarm output for analogue input module in Module-1 or Module-2 socket. ( It is visible if one of analogue input modules is plugged in Module-1 or Module-2 socket )

**0006** If process value is less than minimum value of operating scale or for analogue input module in Module-1 or Module-2 socket or greater than maximum value of operating scale or for analogue input module in Module-1 or Module-2 socket, process output becomes active.(This parameter is visible if one of the analogue input modules is plugged in Module-1 or Module-2 socket)

**AL53** Measurement input selection for Output-3 alarm output.

This parameter is visible if Logic output function of Output-3 is Alarm output and one of the analogue input modules is plugged in Module-1 or Module-2 socket

**0000** Alarm output runs according to the process input

**0001** Alarm output runs according to the analogue input module (2nd sensor input) in Module-1 or Module-2 socket.

**AL53** It determines alarm

It is active if logic output function of Output-3 is alarm output.

**0000** Process high alarm

**0001** Process low alarm

**0002** Deviation high alarm.

**0003** Deviation low alarm.

**0004** Deviation band alarm.

**0005** Deviation range alarm

**0006** Isitici Arizasi Alarmlı. It is active if  $\sim CT$  input module is plugged in Module-1 or Module-2 socket.

**ALH3** Alarm- 3 hysteresis value. (Scale 0% , scale 50%)Unit

It is active if logic output function of Output-3

**Ron3** Alarm on delay time(0, 9999)Seconds

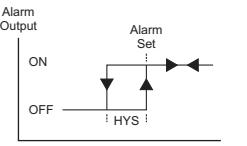

It is active if logic output function of Module-1 is alarm output.

**RoF3** Alarm off delay time (0, 9998)Seconds

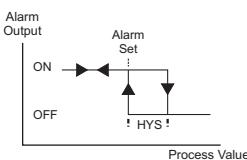

When the value is than 9998,  $[ECH]$  is seen on the display. It means alarm latching output is selected. It is active if logic output function of Output-3 is alarm output.

## Alarm Types

### Process high alarm

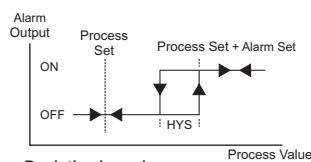

### Process low alarm

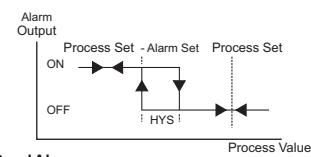

## Alarm Types

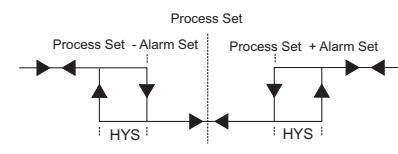

### Deviation high alarm

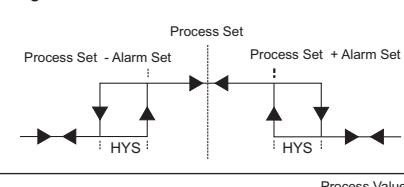

### Deviation low alarm

### Deviation Band Alarm

### Deviation Range Alarm

## Gen ConF: General Parameters

**SU-L** Minimum value for process set and alarm set values

**SU-u** Maximum value for process set and alarm set values

**SUc2** 2. Sensor Set Point Low Limit .sensor scale min. **SUuc2** )

2. Sensor Unit

Module-1 or Module-2 socket Analog Input Modules.

(If you have any of these parameters is observed)

**SUuc2** 2. Sensor Set Point High Limit .sensor scale min. **SUc2** )

2. Sensor Unit

Module-1 or Module-2 socket Analog Input Modules.

(If you have any of these parameters is observed)

**ULtE** While the motor is completely off the valve fully open

While the fully open or fully closed for the pass time required. Value between 5 and 600 seconds can be entered.

(If motorized valve control is selected this parameter is active)

**ULHy** The minimum duration of the valve motor drive output (0,1,5,0)%

UlIt = 100 sec and **ULHy** = %1.0 and the motor driving the valve outlet. The minimum time to be active is  $100 \times 1.0\% = 1$  sec.

(If motorized valve control is selected this parameter is active)

## Com ConF: Parameters for Configuration of Serial Communication

**SDdr** Communication Accessing Address (1,247)

Communication accessing address of device. It can be adjusted from 1 to 247.

**BRud** Communication Baud Rate

**0000** 1200 Baud Rate.

**0001** 2400 Baud Rate.

**0002** 4800 Baud Rate

**0003** 9600 Baud Rate

**0004** 19200 Baud Rate

### PrtY Parity Selection for Communication

**0000** No parity.

**0001** Odd parity.

**0002** Even parity.

### StPb Stop Bit Selection for Communication

**0000** 1 stop bit

**0001** 2 stop bit

### PASS ConF: Operator and Technician Passwords

#### oPPS Operator Passwords (0, 9999)

It is used for accessing to the operator parameters.  
If it is **0000** ; no password protection while entering to the operator Parameters.

If it is different from "0" and user wants to access to the operator parameters:

- 1- If user does not enter **oPPS** password correctly :It turns to operation screen without accessing to parameters.
- 2- When **oPPS** in top display **0000** and in bottom display are seen, if user presses SET button without entering **oPPS** Password (For observing the parameters): Operator can see operator menus and parameters but operator can not change the parameters

#### tLPC Technician Passwords(0, 9999)

It is used for accessing to the technician parameters.  
If it is **0000** no password protection while entering to the technician Parameters.

If it is different from "0" and user wants to access to the technician parameters:

- 1- If user does not enter **tLPC** password correctly :It turns to operation screen without accessing to parameters.: When **tLPC** in top display **0000** and in bottom display are seen, if user presses SET button without entering **tLPC** Password (For observing the parameters): Operator can see operator menus and parameters but operator can not change the parameters.

### Failure Messages in ESM-XX50 Process Controllers

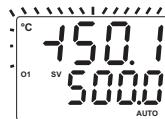

- 1- Sensor failure in analogue inputs. Sensor connection is wrong or there is no sensor connection.

- 2- If parameter in "Disp List" menu is and analogue input module is plugged in Module-1 or Module-2 socket, this is sensor failure of analogue input module. Sensor connection is wrong or there is no sensor connection.

- 3- If parameter is and parameter is and analogue input module is plugged in Module-1 or Module-2 socket, this is sensor failure of analogue input module. Sensor connection is wrong or there is no sensor connection.

- 4- If top display blinks : If analogue input value is less than minimum value of operating scale **[Lo]** top display starts to blink.

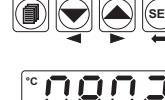

- 5- If top display blinks : If analogue input value is greater than maximum value of operating scale **[Hi]** top display starts to blink.

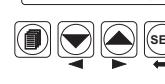

- 6- If operator or technician password is different from "0" and user accesses to the parameter by Set button without entering the operator or technician password and wants to change a parameter, the warning message is shown on the bottom display as shown on the left. Device does not allow to do any changes without entering the password correctly.

- 7- If tuning operation can not be completed in 8 hours, AT led starts to blink. Blinking can be canceled by pressing Enter button.

- 8- If user does not do anything for 120 seconds while device is on operator or technician menus, device turns to operation screen.

- 9- The device is powered up, the normal does not begin to run, and the bottom of the screen As the side flashing; Module-1 and Module-2 slots, EMIX10 EMI-X30, X40-EMI, EMI-X50 Analog input modules installed at the same time the event occurs. The unit normal to return to work, the device energy cut-off and Analog Input one of the modules must be removed.

- 10- When power is on ; not starting the normal operation and blinking the bottom display as shown on the left; It appears when two analogue input modules ( EMI-410, EMI-430,EMI-440, EMI-450 ) are plugged in Module-1 and Module-2 socket at the same time. For starting normal operation power off and pull out one of the analogue input modules.

## Installation

Before beginning installation of this product, please read the instruction manual and warnings below carefully.

In package ,

- One piece unit
- Two piece mounting clamp
- One piece instruction manual

A visual inspection of this product for possible damage occurred during shipment is recommended before installation. It is your responsibility to ensure that qualified mechanical and electrical technicians install this product.

If there is danger of serious accident resulting from a failure or defect in this unit, power off the system and separate the electrical connection of the device from the system.

The unit is normally supplied without a power switch or a fuse. Use power switch and fuse as required.

Be sure to use the rated power supply voltage to protect the unit against damage and to prevent failure.

Keep the power off until all of the wiring is completed so that electric shock and trouble with the unit can be prevented.

Never attempt to disassemble, modify or repair this unit. Tampering with the unit may results in malfunction, electric shock or fire. Do not use the unit in combustible or explosive gaseous atmospheres.

During the equipment is putted in hole on the metal panel while mechanical installation some metal burrs can cause injury on hands, you must be careful.

Montage of the product on a system must be done with it's own fixing clamps. Do not do the montage of the device with inappropriate fixing clamps. Be sure that device will not fall while doing the montage.

It is your responsibility if this equipment is used in a manner not specified in this instruction manual.

## Warranty

EMKO Elektronik warrants that the equipment delivered is free from defects in material and workmanship. This warranty is provided for a period of two years. The warranty period starts from the delivery date. This warranty is in force if duty and responsibilities which are determined in warranty document and instruction manual performs by the customer completely.

## Maintenance

Repairs should only be performed by trained and specialized personnel. Cut power to the device before accessing internal parts. Do not clean the case with hydrocarbon-based solvents (Petrol, Trichlorethylene etc.). Use of these solvents can reduce the mechanical reliability of the device. Use a cloth dampened in ethyl alcohol or water to clean the external plastic case.
