

## **ESM-9995 96 x 96 DIN 1/4 Universal Input Profile Controller**

- 100 program, 1000 step control
- Programmable relay functions per steps
- Universal process input (TC, RTD, mV  $\frac{---}{---}$  , V  $\frac{---}{---}$  , mA  $\frac{---}{---}$  )
- 6 different electric cut-out behaviour
- ON/OFF, P, PI, PD, PID reverse and direct control
- Motorized valve control with feedback
- Motorized valve control floating control
- Auto-Tuning and Self-Tuning (automatic calculations of PID parameters)
- Automatic / Manual operating modes
- Bumpless transfer ability
- Sensor Error detection
- Remote Set control
- Re-transmission (for process, SET values)
- Operating with Real Time Clock (RTC)
- 8 set point which is selected with digital inputs
- ModBus ASCII/RTU communication protocol

## EU DECLARATION OF CONFORMITY

**Manufacturer's Name** : EMKO ELEKTRONIK A.S.  
**Manufacturer's Address** : DOSAB, Karanfil Sk., No:6,  
16369 Bursa, TURKEY

---

The manufacturer hereby declares that the product:

**Product Name** : Profile Controller Unit  
**Type Number** : ESM-9995  
**Product Category** : Electrical equipment for measurement, control and laboratory use

Conforms to the following directives :

2006 / 95 / EC The Low Voltage Directive

2004 / 108 / EC The Electromagnetic Compatibility Directive

has been designed and manufactured to the following specifications:

EN 61000-6-4:2007 EMC Generic Emission Standard for Industrial Environments

EN 61000-6-2:2005 EMC Generic Immunity Standard for Industrial Environments

EN 61010-1:2001 Safety Requirements for electrical equipment for measurement, control and laboratory use

---

### **Authorized Signature**

Name : Serpil YAKIN

Position : Quality Manager

## 1. Preface

ESM series process controllers are designed for measuring and controlling temperature and any process value. They can be used in many applications with their universal process input, multifunction control outputs, selectable alarm functions, serial communication unit and input/output modules.

Some application fields and applications which they are used are below:

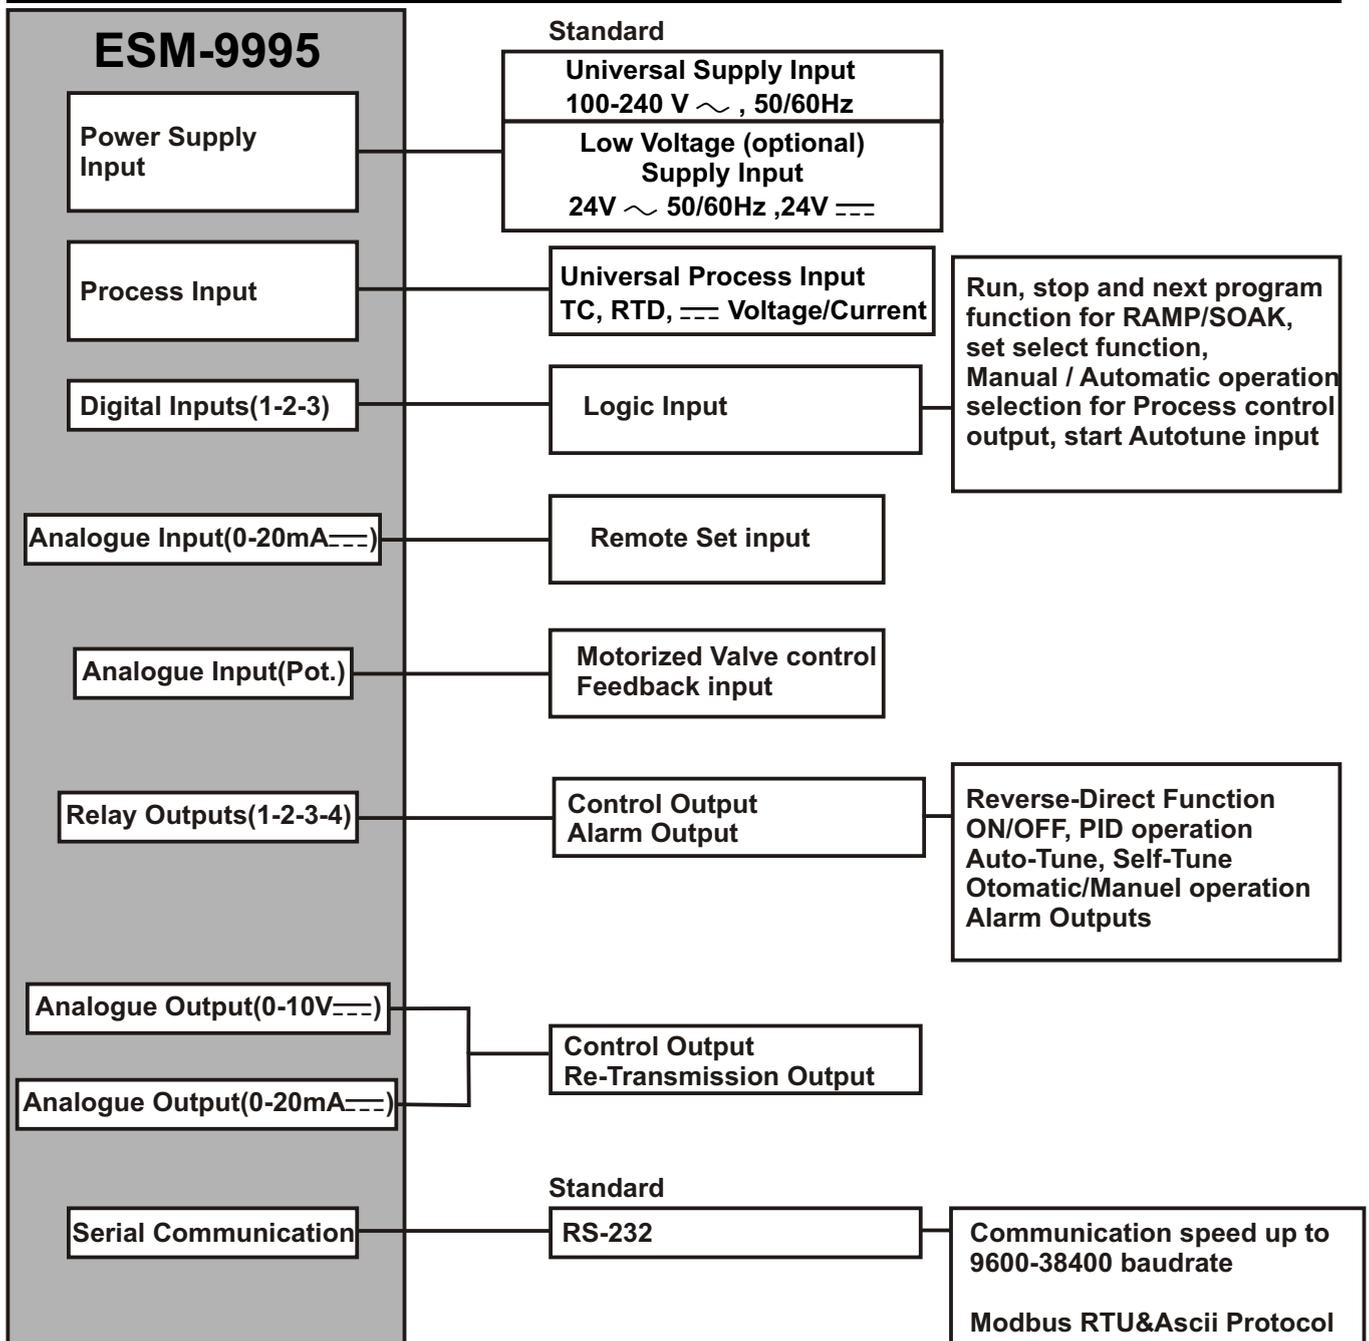

### Application Fields

Glass  
 Plastic  
 Petro-Chemistry  
 Textile  
 Automotive  
 Machine production industries

### Applications

Motorized valve control  
 Profile Control  
 PID Process Control  
 Heater Failure detection

All order information of ESM-9995 are given on the table at left. User may form appropriate device configuration from information and codes that at the table and convert it to the ordering codes.

Firstly, supply voltage then input/output types and other specifications must be determined. Please fill the order code blanks according to your needs.

Please contact us, if your needs are out of the standards.

## 1.3 Warranty

EMKO Elektronik warrants that the equipment delivered is free from defects in material and workmanship. This warranty is provided for a period of two years. The warranty period starts from the delivery date. This warranty is in force if duty and responsibilities which are determined in warranty document and instruction manual performs by the customer completely.

## 1.4 Maintenance

Repairs should only be performed by trained and specialized personnel. Cut power to the device before accessing internal parts.

Do not clean the case with hydrocarbon-based solvents (Petrol, Trichlorethylene etc.). Use of these solvents can reduce the mechanical reliability of the device. Use a cloth dampened in ethyl alcohol or water to clean the external plastic case.

## 2. Installation

Before beginning installation of this product, please read the instruction manual and warnings below carefully.

In package ,

- One piece unit
- Two pieces mounting clamps
- One piece instruction manual

A visual inspection of this product for possible damage occurred during shipment is recommended before installation. It is your responsibility to ensure that qualified mechanical and electrical technicians install this product.

If there is danger of serious accident resulting from a failure or defect in this unit, power off the system and separate the electrical connection of the device from the system.

The unit is normally supplied without a power switch or a fuse. Use power switch and fuse as required.

Be sure to use the rated power supply voltage to protect the unit against damage and to prevent failure.

Keep the power off until all of the wiring is completed so that electric shock and trouble with the unit can be prevented.

Never attempt to disassemble, modify or repair this unit. Tampering with the unit may results in malfunction, electric shock or fire.

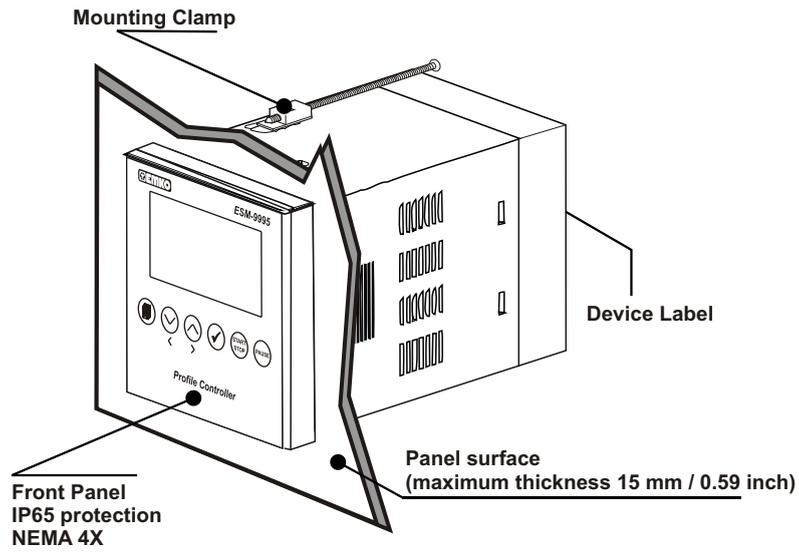

Do not use the unit in combustible or explosive gaseous atmospheres.

During the equipment is putted in hole on the metal panel while mechanical installation some metal burrs can cause injury on hands, you must be careful.

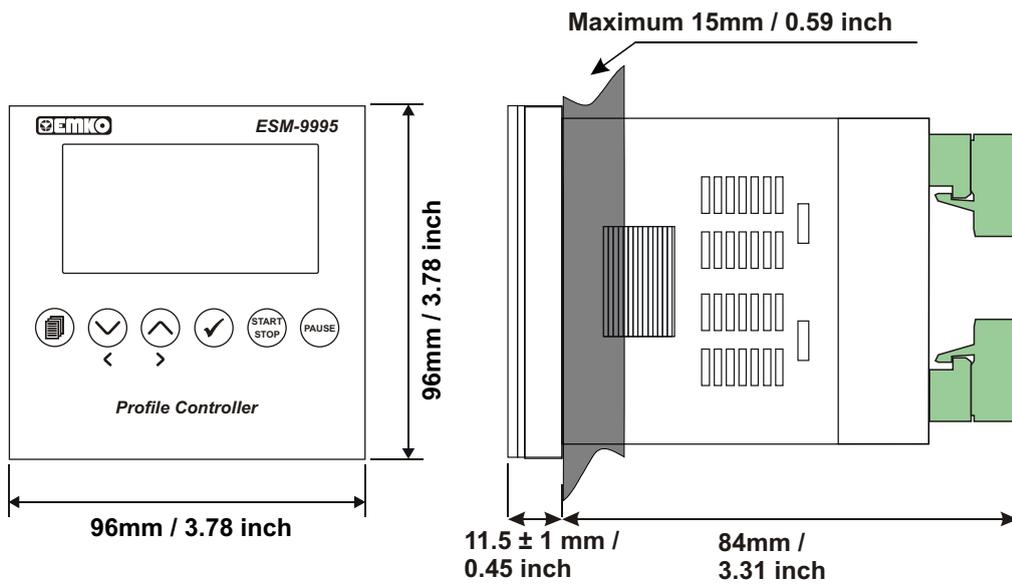

Montage of the product on a system must be done with it's fixing clamps. Do not do the montage of the device with inappropriate fixing clamp. Be sure that device will not fall while doing the montage.

It is your responsibility if this equipment is used in a manner not specified in this instruction manual.

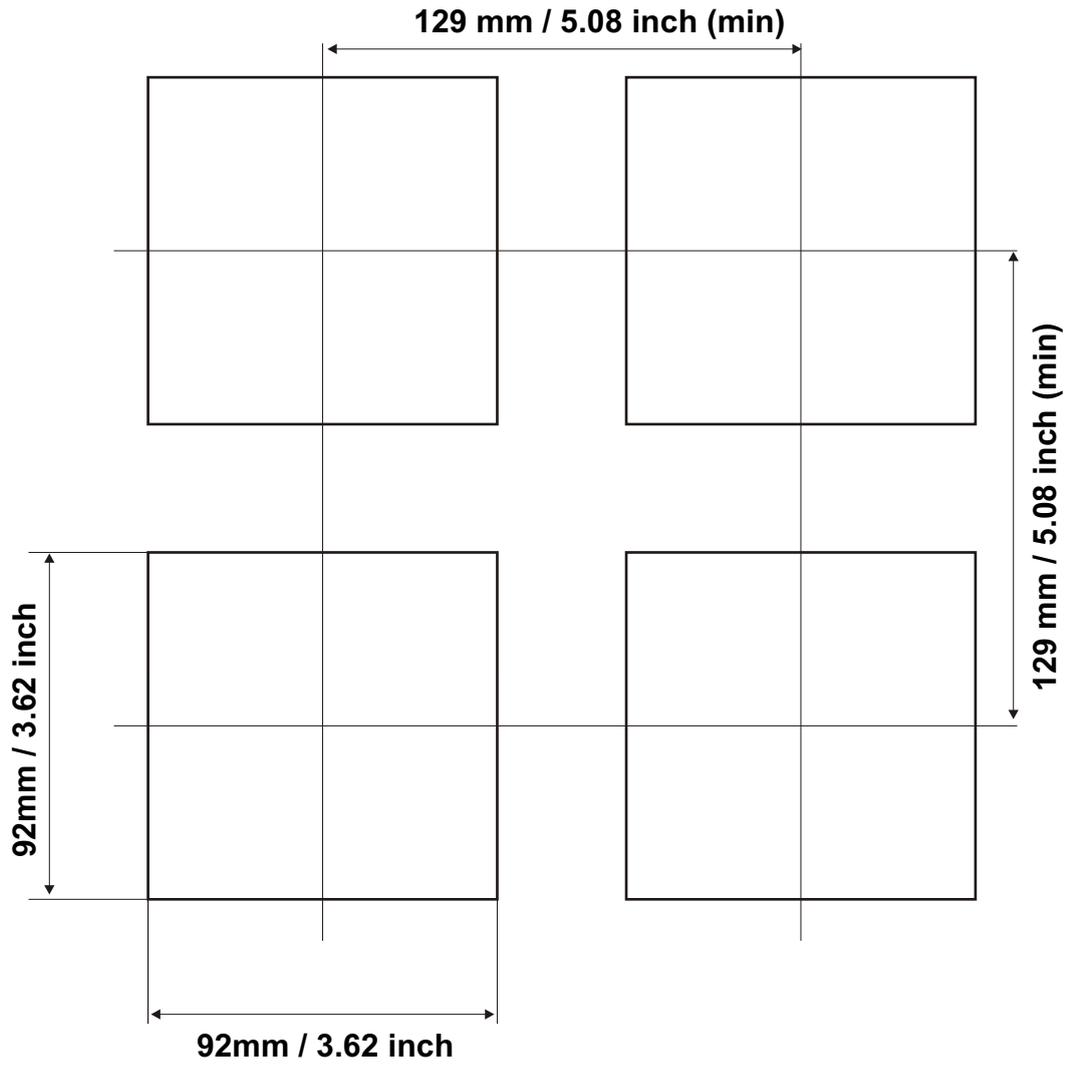

## 2.1 General Description

## 2.2 Dimensions

## 2.3 Panel Cut-out

## 2.4 Environmental Ratings

### Operating Conditions

**Operating Temperature** : 0 to 50 °C

**Max. Operating Humidity** : 90% Rh (non-condensing)

**Altitude** : Up to 2000m.

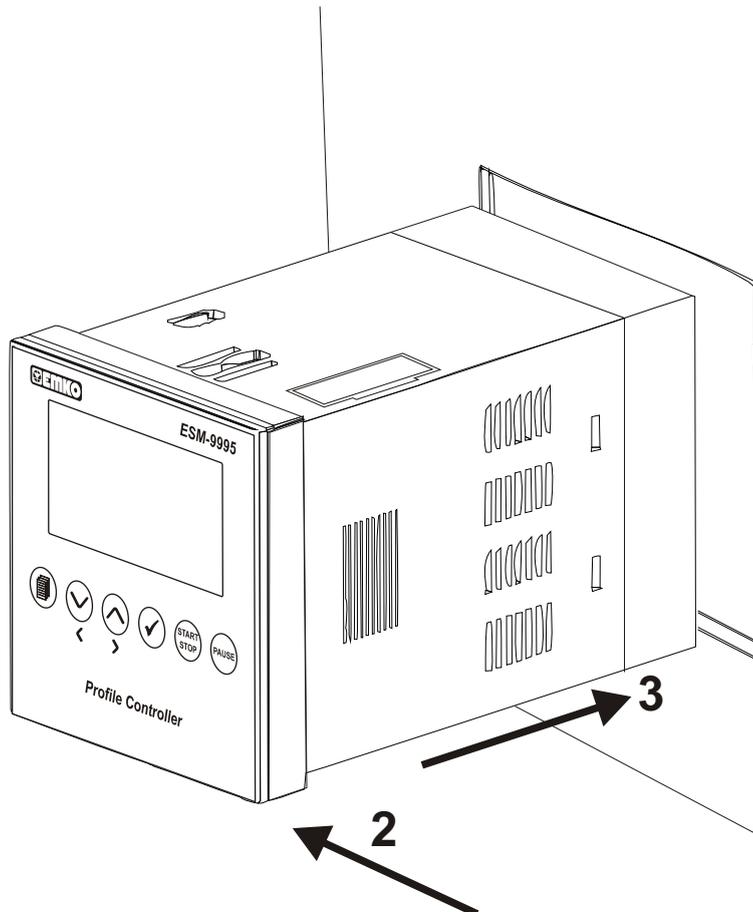

**Forbidden Conditions:**

Corrosive atmosphere

Explosive atmosphere

Home applications (The unit is only for industrial applications)

## 2.5 Panel Mounting

1-Before mounting the device in your panel, make sure that the cut-out is of the right size.

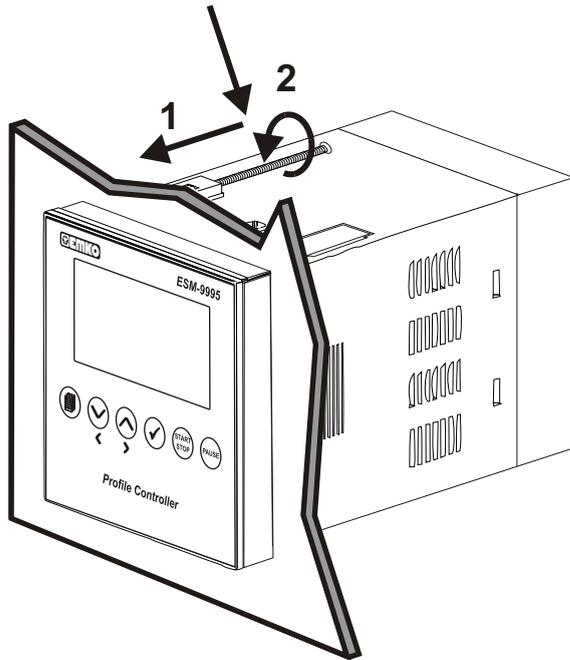

2-Check front panel gasket position

3-Insert the device through the cut-out. If the mounting clamps are on the unit, put out them before inserting the unit to the panel.

During installation into a metal panel, care should be taken to avoid injury from metal burrs which might be present. The equipment can loosen from vibration and become dislodged if installation parts are not properly tightened. These precautions for the safety of the person who does the panel mounting.

## 2.6 Installation Fixing Clamp

The unit is designed for panel mounting.

1-Insert the unit in the panel cut-out from the front side.

2- Insert the mounting clamps to the holes that located top and bottom sides of device and screw up the fixing screws until the unit completely immobile within the panel

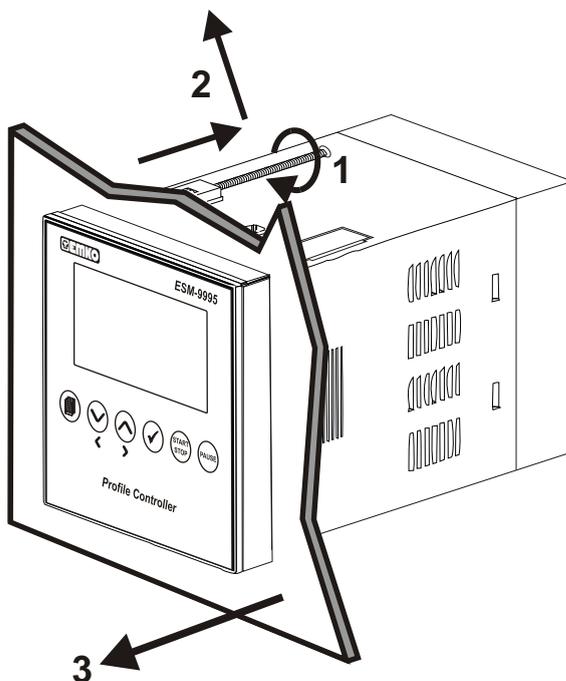

**Montage of the unit to a system must be done with it's own fixing clamps. Do not do the montage of the device with inappropriate fixing clamps. Be sure that device will not fall while doing the montage.**

## 2.7 Removing from the Panel

**Before starting to remove the unit from panel, power off the unit and the related system.**

1-Loosen the screws.

2-Pull mounting clamps from top and bottom fixing sockets.

3-Pull the unit through the front side of the panel

### 3. Electrical Wirings

You must ensure that the device is correctly configured for your application. Incorrect configuration could result in damage to the process being controlled, and/or personal injury. It is your responsibility, as the installer, to ensure that the configuration is correct.

Device parameters has factory default values. These parameters must be set according to the system's needs.

Only qualified personnel and technicians should work on this equipment. This equipment contains internal circuits with voltage dangerous to human life. There is severe danger for human life in the case of unauthorized intervention.

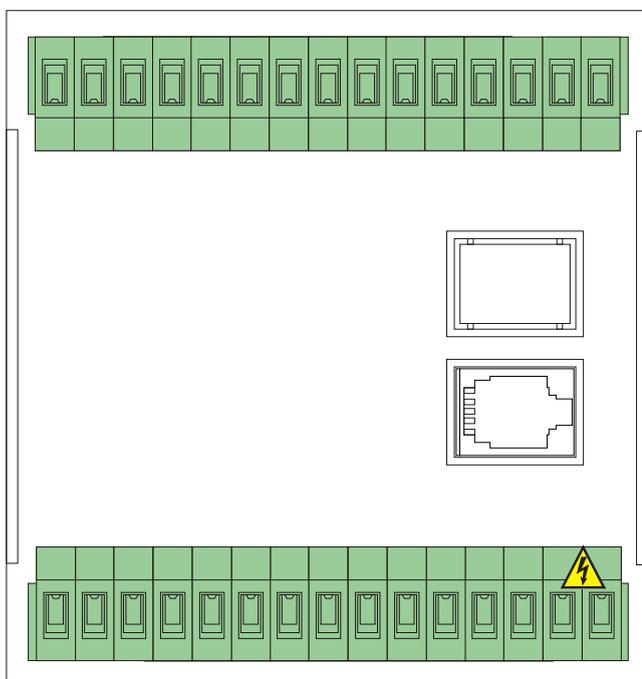

Be sure to use the rated power supply voltage to protect the unit against damage and to prevent failure.

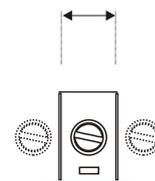

Keep the power off until all of the wiring is completed so that electric shock and trouble with the unit can be prevented.

STEP INSERT SUCCESSFUL
```

  Choose "INS" function using increment and decrement buttons.

 If OK button is pressed, cursor position becomes "PNO:" tab to select source program number.

  Change source program no using increment and decrement buttons.

 If OK button is pressed, cursor position becomes "SNO:" tab to select source step number.

  Change source step no using increment and decrement buttons.

 If OK button is pressed, cursor position becomes "INS" tab.

 If OK button is pressed again, following steps after the SNO number is shifted the next steps. The source step settings is copied to opened area and related message is shown.

 Press OK button again and message will disappear and tab return to EDIT.

## 5. Parameters

### 5.1. Operator Parameters

OPERATOR PARAMETERS		Min	Max	Default	Unit
A01 OPERATING PR. NO	Operating Program number	1	100	1

A22 PWR.FAIL.PERCENT	Power Fail Percent	0	100	0	%
A23 MSG. DISP. TIME	Message display time	1	10	1	Second

**Note-1:** A21-PWR.FAIL.BEHAVIO parameter operating types:

- 1- Program is stopped.
- 2- Program continues remaining step and time.
- 3- Program wait for start approval on remaining step and time. Control output is off.
- 4- Program continues from the beginning of the step.
- 5- Program returns the beginning of the step and wait for approval. Control output is off.
- 6- If the difference, between process value(before power fail) and process value(after power on), is lower than PWR.FAIL.PERCENT parameter, then process continuous its remainig position, otherwise operates 5. entry item.

**Note-2:** A01 parameter is shown, if the device is configured as profile control.

**Note-3:** A12, A13, A14, A15, A16, A17, A18 and A19 parameters are shown, if the device is configured as process control.

## 6. Specifications

<b>Device Type</b>	: Profile Controller unit
<b>Housing &amp; Mounting</b>	: 96mm x 96mm x 87.5mm 1/4 DIN 43700 plastic housing for Panel mounting. Panel cut-out is 92x92mm.
<b>Protection Class</b>	: NEMA 4X (IP65 at front, IP20 at rear).
<b>Weight</b>	: Approximately 0.34 Kg.
<b>Environmental Ratings</b>	: Standard, indoor at an altitude of less than 2000 meters with none condensing humidity.
<b>Storage/Operating Temperature</b>	: -40 °C to +85 °C / 0 °C to +50 °C
<b>Storage/Operating Humidity</b>	: 90 % max. (None condensing)
<b>Installation</b>	: Fixed installation
<b>Overvoltage Category</b>	: II
<b>Pollution Degree</b>	: II, office or workplace, none conductive pollution
<b>Operating Conditions</b>	: Continuous
<b>Supply Voltage and Power</b>	: 100 - 240 V ~ (-%15 / +%10) 50/60 Hz. 6VA 24 V ~ (-%15 / +%10) 50/60 Hz. 6VA 24 V == (-%15 / +%10) 6W
<b>Analogue input 1</b>	: Universal input (TC, RTD, ==Voltage/Current)
<b>Termocouple input types</b>	: Selectable by parameters L (DIN43710) , J ,K ,R ,S ,T ,B ,E ,N (IEC584.1)(ITS90) , C (ITS90)
<b>Thermoresistance Input Types</b>	: PT 100 (IEC751) (ITS90)
<b>==Voltage Input Types</b>	: Selectable by parameters 0...50mV==, 0...5V==, 0...10V==
<b>==Current Input Types</b>	: Selectable by parameters 0...20mA==, 4...20mA==
<b>Analogue input 2</b>	: Remote Set input ( 0...20mA==, 4...20mA==)
<b>Analogue input 3</b>	: Motorized Valve Feedback Potentiometer input.(1K-10K)
<b>Accuracy</b>	: ± 0,25% of full scale for thermocouple, thermoresistance and voltage, ± 0,70% of full scale for current.
<b>Cold Junction Compensation</b>	: Automatically ± 0.1°C/1°C.
<b>Line Compensation</b>	: Maximum 10 .
<b>Sensor Break Protection</b>	: Upscale
<b>Sampling Cycle</b>	: 100 milisecond.
<b>Input Filter</b>	: 0.0 to 900.0 seconds
<b>Giriş Resistance</b>	: TC and RTD inputs >10M Current input 100 0...50mV >10M 0...10V >43K
<b>Digital inputs</b>	: 3 input with isolation
<b>Transmitter Supply output</b>	: 24V == ±%10 max. 50mA
<b>Standard Relay Outputs</b>	: 5A@250V~ (Programmable control or alarm output) (Electrical Life : 100.000 Operation (Full Load))
<b>Analogue Outputs</b>	: 2 output. Selectable 0-4...20mA== and/or 0-2...10V == Must be determined in order.
<b>Profile Programs and Steps</b>	: 100 Program to 1000 Step
<b>Control Forms</b>	: Programmable ON / OFF, P, PI, PD or PID.
<b>Standard Communication</b>	: RS-232 Communication
<b>Communication Protocol</b>	: MODBUS-RTU,ASCII
<b>Display Type</b>	: 128x64 graphic LCD with backlight
